Desert Fish

While hiking through the desert of New Mexico, the Smith family found a fish fossil. They thought it was strange to find something that belonged in the ocean in the desert. They each came up with a reason why there would be fish living in the desert. With whom do you agree and why?

Mrs. Smith: A bird must have dropped the fish as it flew over the desert.

Mr. Smith: Water, wind, and ice must have brought the fish to the desert.

John: A desert formed in an area that was once covered by ocean.

Mary: The fossil came from a volcano that started on the ocean floor.
